## MODERNIZE VISITOR MANAGEMENT IN HIGH-SECURITY ENVIRONMENTS

Your lobby is the first line of defense against unwanted intruders. In high-security environments, protecting your people, property, data, and ideas is even more important. With ZipKey you can do security the welcoming way.

### YOUR REAL-TIME MISSION CONTROL

Knowing who's on-site is the first step to protecting your team and property. With ZipKey, you have full control over all your locations in real time and you'll always know who's arriving, where they're going, and why.

Guest details are stored digitally in the dashboard, which is easy to reference in an evacuation or emergency. You can customize the security requirements for all your sites individually with minimum effort and automatically inform guests of your specific site's policies.

### PROTECT YOUR INTELLECTUAL PROPERTY

Invite your guests with stunning email invitations to make a polished, professional impression. Your guests can pre-register, allowing your team to always know whom to expect. Additionally, your guests can sign legal documents before they arrive.

These documents are automatically stored and easily retrieved when needed. As traditional check-in procedures are moved outside your lobby, the on-site check-in process is accelerated and the risk of overhearing confidential information is eliminated. Thus, ZipKey safeguards your ideas and IP.

### ENHANCE ONSITE SECURITY BY VERIFYING IDENTITIES

With the email invitations comes a QR-Code that makes checking in faster and more convenient than ever before. While checking in, ZipKey scans, verifies, and extracts data from your guest's identity card and does a facial match to ensure the identity of the person.

The resulting Trusted ID utilizes state-of-the-art hardware and software to lives up to the utmost security standards. However, its creation is highly convenient and only takes a few seconds. As a result, you have detailed guest records including their verified identities combined with signed legal documents. And by design, all data is always up to date.

### GRANT ACCESS ONLY TO APPROVED GUESTS

With all information at one place, it has never been more convenient, secure, and efficient to grant access to your properties. The personalized name badges provide extra identity verification and visually prove that guests are authorized to be onsite. You can integrate ZipKey with your existing security system to make your guest's experience even more outstanding and your site even more secure.

All high-security features are compatible with the ZipKey Events solution. For more information, visit our website at [www.zipkey.de](http://www.zipkey.de) or write us at [info@zipkey.de](mailto:info@zipkey.de)
